MISSION TRANSMISSION

AN EXPLORATION OF DISEASE TRANSMISSION
AN INTERACTIVE LECTURE

**SOMEWHERE
THERE
STALKS
A
THING
THAT
IS.....
FROM
THIS EARTH**

DISCOVER THE AMAZING WORLD OF THE MICROBIOLOGIST AND INVESTIGATE EVERYTHING FROM HUMAN POO TO THE IMPORTANT PARTS IN A SNEEZE.

COME AND HELP US ON OUR MISSION TRANSMISSION AT A THEATRE NEAR YOU SOON!

ASPIRE
Higher Education for all

→ Title + Science objective

National Collaborative Outreach Programme

Year 9 & 10 students were invited to “Mission Transmission” as part of their Information, Advice and Guidance programme of events.

Dr Martin Khechara and the Science Shack team, in conjunction with the Society for General Microbiology investigated how disease can be passed by touch, sneezing and faecal contamination.

The aim of the event was to not only raise awareness of disease and how it’s transmitted but gives students an exciting introduction into the world of microbiology.

Students were able to see the many careers in science as well as learn the importance of disease transmission.
